CHAPTER 1

DEVELOPMENT BACKGROUND

TASK

To develop an online form submission website letting people with a driving license to report any accident occurred during the day. So that users who have access to view this information namely ‘The Police’, ‘Road Development Authority’ and the ‘Insurance Company Agents’ can analyze these data and conclude whether to approve or reject the relevant cause in order to let the driver claim from the Insurance company to compensate with the following accidents and also Road Development Authority can obtain a clearer understanding the damages caused to public infrastructure that needs to be repaired, while the police will be able to investigate on who’s liable for the specific incident with the available resources.

REQUIRED FUNCTIONS

- Account creation for the all the 4 types of users representing the General Public, The Police, Road Development Authority and Insurance Company
- Letting the drivers submit forms with the required details and facilitating with options of delete and update to alter any incorrect information and upload images
- A responsive UI such as (List view, click to reveal etc.) for the Police, RDA and Insurance users to thoroughly analyze the submitted information
- Graph Illustrations for better understanding about the statistics of the outcomes
- Letting users view the results regarding to the relevant incident

AVAILABLE FUNCTIONS IN THE DEVELOPED SYSTEM

- ✓ Account Registration /Login Logout for all the different type users
- ✓ Form submission and with option of uploading images
- ✓ Update option to rectify the erroneous data submitted to the system
- ✓ Results showing for the users enrolled with the system
- ✓ A pie chart representing the number of passengers involved in a certain area and a list view option to select the passenger count to reveal the collision date and exact location

CHAPTER 2

ELABORATING THE LOGIC BEHIND THE CODE

2.1 MAIN ASSETS AVAILABLE IN THE SYSTEM

FOR GENERAL PUBLIC DRIVERS (WEB FORM NAME, TASK)

- **LoginPage.aspx**- Driver Registration page
- **Loginother.aspx**- Separate Login for the drivers
- **PUBLIC.aspx**- To submit details regarding the accident
- **ProfilePublic.aspx**- To update information in the system
- **RESULTS.aspx**- To view the case results after analysis

FOR THE POLICE (WEB FORM NAME, TASK)

- **Policereg.aspx**- Registration page for the police
- **PoliceandRda.aspx**- Common page for the police to view information (common page)
- **Loginother.aspx**- Separate Login for the police
- **Statistics.aspx**-To view the images relevant to the accidents (common page)
- **Analysis.aspx**- The details of the users and accident information (common page)
- **Charts.aspx**- Graph representation of certain details (common page)
- **AccountPol.aspx**- To update any mistaken details in the system
- **select.aspx**- To obtain more information about the incident (common page)

FOR THE INSURANCE COMPANY MEMBERS (WEB FORM NAME, TASK)

- **Insurancereg.aspx**- Registration page for the insurance company members
- **LoginInsurance.aspx**-Login page for the members
- **PoliceandRda.aspx**- View information from the system (common page)
- **Analysis.aspx**- Details of the users and accident information (common page)
- **Charts.aspx**- Graph representation of certain details (common page)
- **Statistics.aspx**-To view the images relevant to the accidents (common page)
- **DATASCANNING.aspx**-To approve/rejected the Incident Complain No
- **select.aspx**- To obtain more information about the incident (common page)

FOR THE ROAD DEVELOPMENT AUTHORITY (WEB FORM NAME, TASK)

- **RDAregr.aspx**-Registration page for the RDA members
- **Loginother.aspx**- Separate Login for the RDA
- **Analysis.aspx**- The details of the users and accident information (common page)
- **Charts.aspx**- Graph representation of certain details (common page)
- **Statistics.aspx**-To view the images relevant to the accidents (common page)
- **AccountRda.aspx**- To update any mistaken details in the system
- **PoliceandRda.aspx**- View information from the system (common page)
- **select.aspx**- To obtain more information about the incident (common page)

2.2 EXPLAINING THE LOGIC BEHIND EACH AND EVERY METHOD () USED

PAGE RELEVANT TO GENERAL PUBLIC

Under LogicPage.aspx.cs

Once the user fills out the registration and click submit the data will be transferred to the database (SQL SERVEER)

```
protected void Button1_Click(object sender, EventArgs e)
{
    string NIC_NO = txtNiC.Text;
    string FULL_Name = txtName.Text;
    string Class_of_Vehicle = txtClassVehcile.Text;
    string Status_Reg = txtStatReg.Text;
    string Insurance_No = txtInsNo.Text;
    string Insurance_Category = txtInsCat.Text;
    string Vehicle_No = txtVehicleNo.Text;
    string Engine_No = txtEngNo.Text;

    if (NIC_NO != "" && FULL_Name != "" && Class_of_Vehicle != "" && Status_Reg
    != "" && Insurance_No != ""
        && Insurance_Category != "" && Vehicle_No != "" && Engine_No != "")
    {
        SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string sql = "Insert Into Pub_RegInfo Values(" + NIC_NO + "," + FULL_Name +
        "," + Class_of_Vehicle + ","
            + Status_Reg + "," + Insurance_No + "," + Insurance_Category + "," +
        Vehicle_No + "," + Engine_No + ")";
```

```

SqlCommand cmd =new SqlCommand(sql,con);
cmd.Parameters.AddWithValue("@Insurance_Category",
txtInsCat.SelectedItem.Value);
try
{
    con.Open();
    cmd.ExecuteNonQuery();
    Response.Write("Data Insertion carried out Successfully");
}
catch(Exception ex)
{
    Response.Write(ex.Message);
}

}
else
{
    Response.Write("Please Enter Data to all the Fields");
}

```

Under Loginother.aspx.cs

When the relevant login details are submitted, the parameters assigned to the values will be searched through the database until the relevant values are found hence if the desired values are not found, it would indicate a message saying that login credentials are incorrect

```

static string connectionString = @"Data Source=DESKTOP-RASQODU;Initial
Catalog=ASPDB;Integrated Security=True";

protected void Button1_Click(object sender, EventArgs e)
{
    try
    {
        SqlConnection con = new SqlConnection(connectionString);
        SqlCommand cmd = new SqlCommand();
        cmd.CommandText = "sp_login";
        cmd.CommandType = CommandType.StoredProcedure;
        cmd.Parameters.AddWithValue("@NIC_No", txtLogNIC.Text.ToString());
        cmd.Parameters.AddWithValue("@Insurance_No", txtLogIns.Text.ToString());
        cmd.Connection = con;
        con.Open();
    }
}

```

```

SqlDataReader reader = cmd.ExecuteReader();
if (reader.Read())
{
    Session["NIC_No"] = txtLogNIC.Text.ToString();
    txtInfo.Text = "Login Successful!";

    reader.Close();
    con.Close();

    Response.Redirect("~/PUBLIC.aspx");
}
else
{
    txtInfo.Text = "Invalid Credentials";
}

reader.Close();

con.Close();

}
catch (Exception ex)
{
}
}
}

```

Under PUBLIC.aspx.cs

Since all the text fields are validated once the form is fully completed with the details and with the attached images, all the data will be transferred to the relevant tables in the database

```

protected void Button1_Click(object sender, EventArgs e)
{
    string Incident_Time = txtIncidentTime.Text;
    string Collision_Date = txtDate.Text;
    string Desc = txtDesc.Text;
    string Name = txtAcName.Text;
    string Passengers_No = txtNoPassengers.Text;
    string Injury_Count = txtInjPpl.Text;
    string Incident_Location = txt_location.Text;
    string Complain_No = txtInsComplain.Text;

    if (Incident_Time != "" && Collision_Date != "" && Collision_Date != "" && Desc
    != "" && Name != ""
    && Passengers_No != "" && Injury_Count != "" && Incident_Location != "" &&
    Complain_No != "")

```

```

{

    SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDDB;Integrated Security=True");
    string sql = "Insert Into AccidentInfo_Pub Values('" + Incident_Time + "','" +
Collision_Date + "','" + Desc + "','"
        + Name + "','" + Passengers_No + "','" + Injury_Count + "','" + Incident_Location +
        "','" + Complain_No + "')";
    SqlCommand cmd = new SqlCommand(sql, con);
    try
    {
        con.Open();
        cmd.ExecuteNonQuery();
        Response.Write("Data Insertion is Carried out Perfectly");
    }
    catch (Exception ex)
    {
        Response.Write(ex.Message);
    }

}
else
{
    Response.Write("Please Insert Data to each and every field");
}

byte[] bytes;
using (BinaryReader br = new BinaryReader(FileUpload1.PostedFile.InputStream))
{
    bytes = br.ReadBytes(FileUpload1.PostedFile.ContentLength);
}
string constr =
ConfigurationManager.ConnectionStrings["ASPDDBConnectionString"].ConnectionString;
using (SqlConnection conn = new SqlConnection(constr))
{
    string sql = "INSERT INTO Images VALUES(@Name, @Image, @ContentType)";
    using (SqlCommand cmd = new SqlCommand(sql, conn))
    {
        cmd.Parameters.AddWithValue("@Name",
Path.GetFileName(FileUpload1.PostedFile.FileName));
        cmd.Parameters.AddWithValue("@ContentType",
FileUpload1.PostedFile.ContentType);
        cmd.Parameters.AddWithValue("@Image", bytes);
        conn.Open();
        cmd.ExecuteNonQuery();
        conn.Close();
    }
}
}

```

```
Response.Redirect(Request.Url.AbsoluteUri);
```

```
}
```

In this method it would basically display the uploaded images in a grid view for the users as well

```
protected void Page_Load(object sender, EventArgs e)
{
    if (!this.IsPostBack)
    {
        string constr =
        ConfigurationManager.ConnectionStrings["ASPDBConnectionString"].ConnectionString;
        using (SqlConnection conn = new SqlConnection(constr))
        {
            using (SqlDataAdapter sda = new SqlDataAdapter("SELECT * FROM Images",
conn))
            {
                DataTable dt = new DataTable();
                sda.Fill(dt);
                gvImages.DataSource = dt;
                gvImages.DataBind();
            }
        }
    }
}
```

So the images are stored in the database using bytes in order to retrieve it from the database the below method is being used

```
protected void OnRowDataBound(object sender, GridViewRowEventArgs e)
{
    if (e.Row.RowType == DataControlRowType.DataRow)
    {
        DataRowView dr = (DataRowView)e.Row.DataItem;
        string imageUrl = "data:image/jpg;base64," +
Convert.ToBase64String((byte[])dr["Image"]);
        (e.Row.FindControl("Image1") as Image).ImageUrl = imageUrl;
    }
}
```

Under ProfilePublic.aspx.cs

Users can Update the information fed to the system using the available controllers in site

```
protected void UpdateButton(object sender, EventArgs e)
{
    string NewComplain_No = txtNewComNo.Text;
    string NewIncident_Time = txtNewIncidentTime.Text;
    string NewCollision_Date = txtNewtDate.Text;
    string Newdesc = txtNewDesc.Text;
    string NewName = txtNewAcName.Text;
    string NewPassNo = txtNewNoPassengers.Text;
    string NewInjNo = txtNewInjPpl.Text;
    string NewLoc = txtNew_location.Text;

    SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
    string qry = "UPDATE AccidentInfo_Pub SET Incident_Time=" + NewIncident_Time
+ ",Collision_Date=" + NewCollision_Date + ",describe=" + Newdesc + ", Name=" +
NewName + " , Passenger_No=" + NewPassNo + ",Injury_Count=" + NewInjNo +
",Incident_Location=" + NewLoc + " WHERE Complain_No=" + NewComplain_No + " ";
    SqlCommand cmd = new SqlCommand(qry, con);

    try
    {
        con.Open();
        cmd.ExecuteNonQuery();
        Response.Write("Information Updating is Completed");
    }

    catch (Exception ex)
    {
        Response.Write("Exception Occurred" + ex);
    }
}
```

Under RESULTS.aspx.cs

From this method data will be retrieved and displayed from the database, the data are fed by the insurance agents to the system

```
protected void Page_Load(object sender, EventArgs e)
```

```

{
    string connStr =
ConfigurationManager.ConnectionStrings["ASPDBConnectionString"].ConnectionString;
    SqlConnection conn = new SqlConnection(connStr);

    conn.Open();
    string sql = "SELECT Complain_No, AprRej, ClaimingDocs from DataAnalysis";
    SqlCommand cmd = new SqlCommand(sql, conn);
    SqlDataReader reader = cmd.ExecuteReader();

    GridView3.DataSource = reader;
    GridView3.DataBind();

    conn.Close();

}

```

PAGE RELEVANT TO POLICE

Under Policereg.aspx.cs

Registration details are transferred once the submit button pressed to the database table relevant to gathering information of the users

```

protected void Button1_Click(object sender, EventArgs e)
{
    string SSN=txtssn.Text;
    string Nic=txtNICP.Text;
    string Name=txtPOName.Text;
    string Loc_Dep=txtLocDep.Text;
    string District =txtDis.Text;
    string Dep_Name=txtNameDep.Text;

    if(SSN!=" " && Nic!=" " && Name!=" " && Loc_Dep!=" " && District!=" " &&
Dep_Name!=" " && Dep_Name!=" ")
    {
        SqlConnection con =new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string sql = "Insert Into Police_RegInfo Values('"+ SSN + "', " + Nic + "', " +
Name + "', " + Loc_Dep + "', " + District + "', " + Dep_Name + "')";
        SqlCommand cmd = new SqlCommand(sql, con);

        try
        {

```

```

        con.Open();
        cmd.ExecuteNonQuery();
        Response.Write("Data has been Inserted Successfully");

    }
    catch (Exception ex)
    {
        Response.Write(ex.Message);
    }
}
else
{
    Response.Write("Please Insert Data to All Fields");
}
}
}

```

Under Loginother.aspx.cs

A method to identify the details from the tables from the database relevant for the specific registration event in order to log the user in to the system

```

protected void Button2_Click(object sender, EventArgs e)
{
    try
    {
        SqlConnection con = new SqlConnection(connectionString);
        SqlCommand cmd = new SqlCommand();
        cmd.CommandText = "spPolice_login";
        cmd.CommandType = CommandType.StoredProcedure;
        cmd.Parameters.AddWithValue("@SSN", txtLogSSN.Text.ToString());
        cmd.Parameters.AddWithValue("@Loc_Dep", txtDepName.Text.ToString());
        cmd.Connection = con;
        con.Open();
        SqlDataReader reader = cmd.ExecuteReader();
        if (reader.Read())
        {
            Session["SSN"] = txtLogNIC.Text.ToString();
            txtPoliceInfo.Text = "Login Successful!";

            reader.Close();
            con.Close();

            Response.Redirect("~/PoliceandRda.aspx");
        }
        else
        {
            txtPoliceInfo.Text = "Invalid Credentials";
        }
    }
}

```

```

        reader.Close();

        con.Close();

    }
    catch (Exception ex)
    {

    }
}

```

Under AccountPol.aspx.cs

A method which creates and allows the users to their own profile
Details in the database

```

protected void Button1_Click(object sender, EventArgs e)
{
    string NewSSN = txtNewRDASSN.Text;
    string NewName= txtNewPOName.Text;
    string NewLoc_Dep= txtNewLocDep.Text;
    string NewDistrict= txtNewDis.Text;
    string NewDep_Name= txtNewNameDep.Text;
    if (NewSSN != "" && NewName != "" && NewLoc_Dep != "" && NewDistrict != ""
    && NewDep_Name != "" )
    {
        SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string qry = "UPDATE Police_RegInfo SET Name=" + NewName + ",Loc_Dep="
+ NewLoc_Dep + ",District=" + NewDistrict + ", Dep_Name=" + NewDep_Name + "
WHERE SSN=" + NewSSN + " ";
        SqlCommand cmd = new SqlCommand(qry, con);

        try
        {
            con.Open();
            cmd.ExecuteNonQuery();
            Response.Write("Information Updating is Completed");
        }

        catch (Exception ex)
        {
            Response.Write("Exception Occurred" + ex);
        }
    }
}

```

PAGE RELEVANT FOR THE ISURANCE AGENTS

Under Insurancereg.aspx.cs

Once the submit button is pressed the method is created to transfer the details to relevant the table in the database

```
protected void Button1_Click(object sender, EventArgs e)
{
    string SSN_INS = txtInsASSN.Text;
    string NIC_INSNO = txtInsNIC.Text;
    string AGENT_NAME = txtInsName.Text;
    string DEP_NAME = txtInsDEPName.Text;
    string BRANCH_NAME = txtInsBRN.Text;
    string DISTRICT = txtInsDis.Text;
    string JOB_TITLE = txtInsJobTitle.Text;

    if (SSN_INS != "" && NIC_INSNO != "" && AGENT_NAME != "" &&
    DEP_NAME != "" && BRANCH_NAME != "" && DISTRICT != "" && JOB_TITLE !=
    "")
    {
        SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
        RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string sql = "Insert Into Ins_RegInfo Values('" + SSN_INS + "','" + NIC_INSNO +
        "','" + AGENT_NAME + "','" + DEP_NAME + "','" + BRANCH_NAME + "','" + DISTRICT
        + "','" + JOB_TITLE + "')";
        SqlCommand cmd = new SqlCommand(sql, con);

        try
        {
            con.Open();
            cmd.ExecuteNonQuery();
            Response.Write("Data has been Inserted Successfully");
        }
        catch (Exception ex)
        {
            Response.Write(ex.Message);
        }
    }
    else
    {
        Response.Write("Please Insert Data to All Fields");
    }
}
```

Under LoginInsurance.aspx.cs

Login method to log the user to the relevant main page of the site

```
protected void Button3_Click(object sender, EventArgs e)
{
    try
    {
        SqlConnection con = new SqlConnection(connectionString);
        SqlCommand cmd = new SqlCommand();
        cmd.CommandText = "spIns_login";

        cmd.CommandType = CommandType.StoredProcedure;
        cmd.Parameters.AddWithValue("@SSN_INS", txtLogInsSSN.Text.ToString());
        cmd.Parameters.AddWithValue("@BRANCH_NAME",
txtInsBRNNAME.Text.ToString());

        cmd.Connection = con;
        con.Open();
        SqlDataReader reader = cmd.ExecuteReader();
        if (reader.Read())
        {
            Session["SSN_INS"] = txtLogInsSSN.Text.ToString();

            txtInsInfo.Text = "Login Successful!";

            reader.Close();
            con.Close();

            Response.Redirect("~/PoliceandRda.aspx");
        }
        else
        {
            txtInsInfo.Text = "Invalid Credentials";
        }

        reader.Close();

        con.Close();
    }
    catch (Exception ex)
    {
    }
}
```

Under DATASCANNING.aspx.cs

Method to store the details of the analyzed photos in order to publish it to the drivers of the system

```
protected void Button2_Click(object sender, EventArgs e)
{
    string SSN_INS = txtInsReSSN.Text;
    string Complain_No = txtInsCom.Text;
    string AprRej = txtInsapp.Text;
    string ClaimingDocs = txtInsDoc.Text;

    if (SSN_INS != "" && Complain_No != "" && AprRej != "" && ClaimingDocs !=
    "")
    {
        SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string sql = "Insert Into DataAnalysis Values('" + SSN_INS + "','" + Complain_No
+ "','" + AprRej + "','" + ClaimingDocs + "')";
        SqlCommand cmd = new SqlCommand(sql, con);

        try
        {
            con.Open();
            cmd.ExecuteNonQuery();
            Response.Write("Data has been Inserted Successfully");
        }
        catch (Exception ex)
        {
            Response.Write(ex.Message);
        }
    }
    else
    {
        Response.Write("Please Insert Data to All Fields");
    }
}
```

PAGE RELEVANT FOR THE RDA

Under RDAreg.aspx.cs

Method to store the registration details of the users separately in the database

```
protected void Button1_Click(object sender, EventArgs e)
{
    string SSN=txtRDASSN.Text;
    string NIC_No=txtRDANIC.Text;
    string Name=txtRDAName.Text;
    string Dep_Name=txtRDADEPName.Text;
    string Branch=txtRDABRN.Text;
    string District = txtRDADis.Text;

    if (SSN != "" && NIC_No != "" && Name != "" && Dep_Name != "" && Branch != "" && District != "")
    {
        SqlConnection con = new SqlConnection(@"Data Source=DESKTOP-
RASQODU;Initial Catalog=ASPDB;Integrated Security=True");
        string sql = "Insert Into RDA_RegInfo Values('" + SSN + "','" + NIC_No + "','" +
Name + "','" + Dep_Name + "','" + Branch + "','" + District + "')";
        SqlCommand cmd = new SqlCommand(sql, con);

        try
        {
            con.Open();
            cmd.ExecuteNonQuery();
            Response.Write("Data has been Inserted Successfully");
        }
        catch (Exception ex)
        {
            Response.Write(ex.Message);
        }
    }
    else
    {
        Response.Write("Please Insert Data to All Fields");
    }
}
```

Under Loginother.aspx.cs

A method to log the specific user to the system using the 'session method'

```
protected void Button3_Click(object sender, EventArgs e)
{
    try
    {
        SqlConnection con = new SqlConnection(connectionString);
        SqlCommand cmd = new SqlCommand();
        cmd.CommandText = "spRDA_login";

        cmd.CommandType = CommandType.StoredProcedure;
        cmd.Parameters.AddWithValue("@SSN", txtLogRDASSN.Text.ToString());
        cmd.Parameters.AddWithValue("@Branch_No",
txtRDABRNNAME.Text.ToString());

        cmd.Connection = con;
        con.Open();
        SqlDataReader reader = cmd.ExecuteReader();
        if (reader.Read())
        {
            Session["SSN"] = txtLogRDASSN.Text.ToString();

            txtRDAInfo.Text = "Login Successful!";

            reader.Close();
            con.Close();

            Response.Redirect("~/PoliceandRda.aspx");
        }
        else
        {
            txtInsInfo.Text = "Invalid Credentials";
        }

        reader.Close();
        con.Close();
    }
    catch (Exception ex)
    {
    }
}
```

Under AccountRda.aspx.cs

LOGIN UI'S FOR EACH REGISTRATION TYPES

The design view shows three login forms side-by-side. Each form has a title bar (PUBLIC, POLICE, RDA) and a 'LOGIN' button at the bottom. The PUBLIC form has fields for NIC NUMBER, FULL NAME, and INSURANCE NUMBER. The POLICE form has fields for SOCIAL SECURITY NUMBER, FULL NAME, and DEPARTMENT LOCATION. The RDA form has fields for SOCIAL SECURITY NUMBER, FULL NAME, and BRANCH NAME.

1. Developing the UI Design and Back End Coding for the Login Process

Firstly, a web form was created by the name of LoginPage.aspx.com and a separate div tag was created, under which button controllers and text boxes were included separately for the Names, NIC number, Branch name, Job title etc. Since separate div tags were created under each button controller, the back-end coding was done. Basically, during the click event, the inserted values in the text boxes are assigned to a specific variable and that variable will act as a search key and search through the database (SQL Server) for the relevant information inserted during the registration process. Once the specific values are found, the user will be able to login to the main page/ dashboard. The technique used in this process is known as Sessions.

*“A SQL session is an **occurrence of a user interacting with a relational database using SQL commands**. When a user initially connects to the database, a session is established. A session may be invoked by either direct connection to the database or through a front-end application.”*

There are 4 button click events, namely, for the public, police, Road Development Authority, and the Insurance companies. Once the program is run, the users will be able to see the UI design for the login process and separately once the relevant information are inserted, user will be able to proceed forward.

2. Developing the UI Design and the Back-end coding for the Registration process

Here first of all a web form was created by the name of RegisterPage.aspx.com and a separate div tag was created, under which button controllers and text boxes were included separately for the SSN, NIC No., Name, Dep_Name, Branch_ District, etc. Since separate div tags were created under each button controller, the back-end coding was done. In the event of click the data inserted in the text boxes are assigned to a specific variable and that variable will store the data in the database (SQL Server) in the relevant registration data table. Once the data is stored inside the table the user gets registered to the system.

There are 3 button click events for the Police, Road Development Authority and the Insurance companies. When the program starts to run the users can see UI designs for the 3 types of user registration processes separately. When the user registers themselves for the relevant category, they can login to the system entering those details in the login process.

3. Police and RDA UI Design and Back-end coding

Here first a web page is created to show the images uploaded and the complaints numbers in a table by the users. This is where the officers can see all the reports of accidents and statistics of the data of accidents. The officers can retrieve the images and when they type in the image ids. For that, a Select SQL command is used to retrieve the images of those specific images. Process Request method is used to get those images. The data can be displayed in a pictorial form as in a chart as well. The user registration info and accident details can be retrieved from the database as well. For those SQL commands are used.

4. Database Creation with Tables

For the database we have selected the SQL Server database. The Database is consisting of 7 tables. Images in one table. Police, Road Development Authority, Public and Insurance user details in tables and Data Analysis information in a separate table as well. For Accidents recorded by the public a separate table is being created to store details of them as well. For each table there is an unique primary key. For example, NIC No and SSN in Public and Police Tables for examples. The database is connected to the Project using the connection string of the database. The Connection string is called for each instance where it is used in the project. The tables are fed with information and when an user registers themselves with the system the details provided will be stored in the relevant table of the user.

5. Image Upload and Retrieval and Accident Recording UI designs and backend coding

When reporting an accident, the public has to upload images of the accident scene for better clarity. For that inside a separate div tag, the grid view tag is used. So that they can upload the images and the data of the images can be seen after uploading it. Such as the Image name and the Image ID. When the image has uploaded the image and the details of the image will be stored in the database in the Image table. For that SQL command INSERT is used in the code. Binary Reader class is used to simplify the reading of the primitive data of the image. Other than the Image Upload A webform is created to enter the accident details as well. For that Text, boxes have been used to enter details. At the end of the form, a button is inserted to submit the details. On button click event a SQL command will run to insert the data into the database. Incident Time, date, No. of passengers, and Complaint Number are a few of the details to be filled in the form. Details entered will be recorded in the Accident details table in the database. A try-catch block is used to check if all the fields are filled out before submitting. If all are not filled a message will be shown as “Please Insert Data to each field” or else as “Data Insertion is Carried out Perfectly”.

6. UI designs and back-end coding for User accounts

First of all a web form is created with the name AccountPol.aspx Then text boxes are added to get the details of the Police. Through this form, the Users can update their details. Here Text boxes are added to enter the details of the police. After filling out the form an update button is at the bottom of the page to submit the details. The data will be passed to the database and get updated on the Button Onclick method. An SQL Update query is used to perform this task. The same procedure is done for the Road Development Authority as well. The fields are validated as well to increase efficiency and reduce data abnormality. A try-catch block is used to identify whether the form is filled correctly. If yes, a message will be shown as “Information updating is successful” else a message will be shown as “Exception occurred”.
